

Move Over POTS. PIAB Is Here.

POTS can no longer fulfill the telecom needs of modern businesses.

It's Time to Transform Your Phone Lines

Using analog phone lines for voice and special communication services is expensive and antiquated.

It doesn't come with security enhancements to ensure safety and privacy. There's no failover in case of emergencies either.

So, it's high time you implement a digital transformation solution such as POTS in a Box (PIAB) for POTS Transformation from PAG.

What You Get With POTS Transformation:

Plug-and-Play Functionality

PIAB is a turnkey solution that includes the required hardware and software. You can get it installed and set up your phone lines within seconds.

Supported Lines

In addition to voice, POTS Transformation supports specialty lines, including:

- Fax
- Alarm
- E-911
- Elevator
- POS terminal
- Vending machine
- ATM

All of these are critical lines for the smooth operation of any business, and they are approved by fire marshalls as well as PCI compliant.

3-Way Connectivity

PIAB provides three connectivity options:

- WiFi
- Broadband
- 3G/4G LTE

It guarantees failover protection with alternate routing. The system also comes with battery backup to further guarantee uptime – a vital requirement for all businesses.

Dual SIM Support

The PIAB device supports SIM cards from standard carriers (AT&T, Verizon, and Sprint). The availability of dual SIM slots further enhances failover protection and ensures call completion.

Enterprise-Grade Security

Calls are routed through a firewall-equipped network operations center to strengthen privacy and security. This technology breakthrough is future-proofing your POTS lines as the old copper networks are being phased out.

Why PAG?

Our PIAB system is a one-stop solution for the digital transformation of your phone lines.

Best of all, we reduce your POTS services costs.

We've catered to the tech-related needs of 750+ businesses across 10,000+ locations and helped them save \$700 million.

Give your voice and specialty phone lines the modern power they need. Get in touch with us to schedule a demo of PIAB.
